removed.txt

Alex,

Certainly, while it is a strong possibility, I don't automatically assume that EnCana is responsible for the emergence of what I can only now speculate (without data) to be a methane seep. Regardless of its composition, the source of this seep presumably remains unknown. It seems unlikely, then, that EnCana would be inclined nor that EnCana should be expected to assume costs associated with sample collection, particularly around an event impacting a public waterway, when so many variables remain unknown.

I am available all day today should Carlos Lujan (who I believe is your environmental specialist based in Rifle), or another COGCC representative wish to visit this site and/or collect a sample. I could accompany.

Thanks, Lisa

Lisa,

Encana has their consultant collecting quarterly samples from monitoring wells today. Will they be able to collect a sample from the referenced seep while they are out there yet today?

Thanks

Alex

Re: Access to sample seep activity along west Divide Creek

To whom it may concern;

Should any entity wish to engage existing, new or expanded sampling on our property, relative to this seep or any other event, please coordinate with myself, as landowner in order to secure permission and logistics of access. Permissive access should not be assumed. Any raw as well as refined data resulting from such collection will be expected to be made available to all landowners of this property.

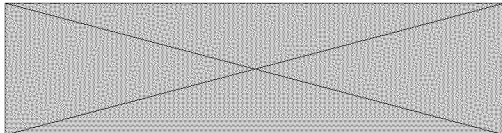

Thank you, once again, for your considerations of this matter.

Lisa Bracken
